Re: Generator
Kerry

We propose installing a whole building generator at the bus garage, I have calculated the total load on the building and believe we can use a 125 KW NG unit. The unit we are proposing is a Kohler unit as the Gillette unit previously prices does not come in a 125 KW unit.

The cost below includes all wiring with a 5-6" concrete slab for the unit, gas piping to the unit for the NG unit all inspections from the county, startup and warranty start up.

The cost of the NG unit is \$125,000.00.

I will include attached the unit proposed, the packet I dropped off at your office has the transfer switches I propose to use

We will decommission the existing Grainger unit if you want and remove if you want us to.

If you desire to move forward with this work, at that time I will arrange a meeting with Duke Energy as well as Transylvania County inspection department to go over the work proposed as well as engineering and National Electrical code specifications.

Thank You

David R Walters
